

# INFRASCALE DISASTER RECOVERY

Avoid downtime when disaster strikes, hardware fails, or ransomware infects your systems. Infrascale Disaster Recovery lets you instantly recover your data & systems by spinning up virtual machine replicas either locally or in the cloud†.

## Key Features & Benefits

### Boot Ready in Minutes

We're able to offer an industry-leading boot-ready time for failover and have an average recovery time of under two minutes.

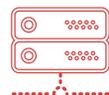

### Failover to the Cloud†

For Windows and Linux environments, virtual or physical, administrators can boot up VMs from the local appliance or in the cloud†, with RDP or VNC access.

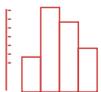

### Drag-and-Drop Orchestration

Use our drag-and-drop, graphical orchestration workflow editor, also known as a runbook editor, to specify the order in which machines are recovered, create groups of machines to boot simultaneously, and specify time intervals between system boots to ensure a smooth, stress-free system recovery.

### Software Defined Networking

Infrascale Disaster Recovery rebuilds your network automatically and on the fly using software-defined networking technology – effectively capturing a complete replica of your on-premise data center in the cloud.

### Radical Transparency

We publish our actual recovery times to document just how fast we can recover systems. Check out our CloudBoot™ Histogram and discover the fastest DRaaS solution on the market.

### Any Cloud

Replicate your data to Infrascale's cloud, a private cloud, or third-party clouds such as Google Cloud, AWS, Azure, or IBM Cloud.

### Guilt-free Disaster Recovery Testing

Perform unlimited Disaster Recovery tests without having to formally declare a disaster or incur additional costs. Our orchestration functionality lets you test system dependencies before a real emergency hits.

### Disaster Recovery for Linux

If you're running Linux in your environment, you can failover locally or in the cloud. Infrascale Disaster Recovery supports Red Hat, CentOS, Debian, and Ubuntu server operating systems.

### Recovering Virtualized Environments

Backup physical machines and recover them to existing hypervisors, or recover VMs as physical machines (P2V and V2P recovery support). Set policies to automatically discover and protect newly created VMs to save additional time and money, and reduce risk of downtime.

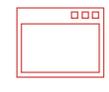

### Local Disaster Recovery

For micro disasters and small server crashes, it's often faster to spin up VMs on the local appliance. In a matter of minutes, administrators can have VNC access and use a live, running machine. Operations can quickly fail back by powering off the VMs and restoring it back to the production environment.

### Use your Existing Hardware

Looking to leverage your existing data center infrastructure? No problem. The on-premise component of Infrascale Disaster Recovery is also available as a VMware and Hyper-V virtual appliance.

### Central Deployment

All system components can be deployed directly from the Infrascale dashboard. System configuration and management can also be performed centrally, regardless of how distributed are the systems to be protected.

† Failover to the cloud is not available with Infrascale Disaster Recovery Local.

# Which Infracore Disaster Recovery Is Right For You

	INFRASCALE DISASTER RECOVERY	INFRASCALE DISASTER RECOVERY - LOCAL
PRIMARY USE CASE	Industry leading Backup and Disaster Recovery, with Local and/or Cloud failover	Industry leading Backup and Disaster Recovery, with Local failover only
DR CAPABILITIES		
— Appliance Failover	●	●
— Cloud Failover	●	
— Unlimited DR testing	●	●
— Failover one or multiple systems	●	●
— Failover network	●	
REPLICATION	All jobs	1 (last) job per day
ENDPOINT BACKUP		
— Windows & MacOS	●	●
SERVER BACKUP		
— Windows, Linux & Unix	●	●
— VMware & Hyper-V	●	●
APPLICATION BACKUP		
— Microsoft Exchange	●	●
— Microsoft SQL Server	●	●
BACKUP LOCATION		
— Infracore Cloud, Public Cloud & Private Cloud	●	●
BACKUP CAPABILITIES		
— Files and folders	●	●
— Entire system	●	●
RTO/RPO ESTIMATES		
— RTO (minutes)	●	●
— RPO (1hr or less)	●	●
OTHER FEATURES		
— Deduplication and WAN acceleration	●	●

Founded in 2011, Infracore provides comprehensive, cloud-based data protection by delivering industry leading backup and disaster recovery solutions. Combining intelligent software with the power of the cloud, Infracore removes the barriers and complexity of secure, offsite data storage, and standby infrastructure for real time disaster recovery. Trusted and recommended by leading independent industry experts, Infracore equips its customers with the confidence to handle the unexpected by providing greater availability, better security, and less downtime, when it comes to their data.

## HOW TO BUY

Need a quote? Need help finding an Infracore Reseller?

CONTACT US AT

**1-877-896-3611**

and one of our DR and backup consultants can provide a custom quote or direct you to a qualified reseller.
